Step up wetlands conservation

EDITOR: Editor: The month of March has begun on a good note for farmers with rains spreading all over the country.

Perhaps farmers should embrace the rains by planting crops. However, for the peri-urban and slum dwellers, this is the worst period because of the floods that normally destroy their property, especially those living in lowland areas and swamps.

Last week, I watched on a local television people in Kigowa-Nakawa division crying and calling for government to intervene and help them because their houses had been submerged by floods. But who is to blame for this mess?

People have continued to construct houses in wetlands yet we have institutions like NEMA to protect our wetlands. For example,

when you go to Banda, Bugolobi, and many other places, people have continued to encroach on wetlands. Some wetlands have also been given away to investors in the guise of development.

Should we, therefore, sacrifice our goal of conserving the environment because of development? How come those who have encroached on wetlands have not faced the wrath of the law?

As a country we need to wake up and protect our wetlands because the effects of climate change affect all of us.

Ugandans should also appreciate the need to conserve our environment by desisting from encroaching and misusing wetlands.
